Grower Tips:	
•	Very fast to produce.
•	In zone 6, overwinter above freezing. In warmer climates, can be overwintered in a polyhouse with no heat.
•	Trim often to create a full, dense, rounded container with lots of flowers. Avoid cutting into any thick stems.
•	Can be cycle-pruned to ship in bloom through the season; allow 6-8 weeks after last trim for flower buds to form.
•	Highly resistant to powdery mildew, but all cultural methods to avoid it should be implemented (proper spacing, water only in the mornings, provide good air circulation, clean up fallen foliage).
•	Spider mites may be an issue; scout frequently and minimize heat and drought stress.
