Grower Tips:	
•	Oso Easy roses benefit from frequent light trimming, which produces an attractive habit and encourages abundant bloom.
•	Will come out of winter fine in an unheated polyhouse; however, overwintering above freezing can help you ship in-bloom product earlier.
•	May be cycle-pruned for a continuous supply of in-bloom product to ship; Allow 6-8 weeks after a trim for flower buds to form. Keep well watered and fertilized.
•	Oso Easy roses are disease resistant in the landscape, but all normal rose disease prevention methods – avoid overhead watering, clean up debris, etc. – are strongly recommended for the best crop.
•	Watch for aphids and spider mites.
