

# SCENTARA PURA®

*Syringa x hyacinthiflora* 'SMNSHSO' pp# 31,119; cbraf

A standout in our field and container trials, this well-branched, semi-dwarf, compact lilac blooms heavily each spring. The flower buds emerge a mulberry-violet and open to clear jacaranda purple. Developed from low-chill bloodlines for improved warm climate performance and resistant to powdery mildew.
