## Grower Tips:

- Vigorous and easy to grow, this plant has great potential for the landscape market. Can be sold the first season.
- Blooms through spring, but highly textured glossy foliage ensures interest at retail all season.
- Grow near 'Mohican' or 'Alleghany' to ensure a good crop of fruit on all plants.
- Flowers are borne on old wood – dormant and spring pruning will remove buds for the season. Stop trimming in late July to allow flower buds to form for sale the following season.
- Trim 3-4 times to create a dense plant. Trimming is important to prevent legginess in the container.
